ABOUT ME

Senior product designer working both ends of the spectrum.
By day: complex enterprise UX at Vienna Insurance Group (**300+ daily users**).
On the side: co-founded **Chisme**, scaled from zero to **20K+ MAU** with a **4.7 App Store rating**. 5+ years. Based in Barcelona.

CORE SKILLS

- Enterprise UX (insurance, finance)
- Consumer mobile apps (iOS, Android)
- Design systems (Figma Variables)
- A/B testing & experimentation
- Stakeholder management
- Accessibility (WCAG)
- Prototyping & usability testing
- AI-assisted web development

TOOLS

- Figma
- Cursor + Claude (AI-augmented design + development)
- Framer
- RevenueCat
- Google Analytics 4
- Jira / Confluence

Slovak	Native
Czech	C2
English	C1
Spanish	B1/B2

WORK EXPERIENCE

Senior Product Designer

GetFound s.r.o. | Jan 2021 – Present

Lead end-to-end product design for enterprise clients in finance and insurance. Own projects from discovery through launch, partnering with PMs, engineers, and business stakeholders. Contribute to and help govern the shared design system, applying WCAG accessibility guidelines across enterprise applications.

Senior Product Designer — Vienna Insurance Group | Jan 2024 – Present

Own UX across multiple internal applications used daily by **300+ insurance employees** in operations, supervisory, and field teams.

- Product Modeler** — Built a configuration platform managing insurance product structures with thousands of parameters, using a tree-table navigation pattern with breadcrumb context, co-designed with product owners and backend engineers to align UI with the data model
- Tasklist** — Designed an internal task management system for insurance agents with categorization, prioritization, and status logic, scoped through workshops with operations leads. Responsive across desktop and mobile.
- Reporting Dashboards** — Designed analytics dashboards giving supervisors of **300+ employees** daily visibility into ongoing, completed, and delayed tasks across teams, time periods, and operational units — with comparison views for weekly and historical metrics

Tools: Figma, Token Studio, Jira, Confluence

Product Designer — BOURAČKA Web App | 2022

Designed a **market-first web application** for online accident reporting and multi-insurer claim submission — simplifying a traditionally offline and fragmented process.

- Designed and iterated the end-to-end claim submission flow with the founding team and engineering
- Restructured form logic and step progression to support higher completion rates

Product Designer, Smart Expert (Insurance App) | 2021

Mobile app for insurance field agents to document and process claims on-site.

- Streamlined data collection, photo documentation, and report submission into a focused mobile flow for non-technical users in real-world field conditions (poor connectivity, time pressure)

Product Projects

Co-Founder & Product Designer — Chisme | Jun 2025 – Present

Women-only social app for meeting people through shared real-life plans. Built from zero with one co-founder while working full-time.

- Scaled the app from **zero to 20K+ MAU** with **14% D7 / 8% D30 retention** by designing the full product experience — onboarding, discovery, chat, social interactions — and iterating activation flows through A/B testing
- Achieved **~3% free-to-paid conversion** by designing the subscription paywalls and upgrade triggers (RevenueCat)
- Built the foundational UI component library and design system patterns from day one, enabling fast iteration as the product scaled
- Implemented safety and moderation UX for healthy community interactions
- Drove organic growth via referral mechanics and early community engagement flows

Metrics: 20K+ MAU · 4.7 App Store · 4.5 Google Play · 14% D7 / 8% D30 retention · ~3% paid conversion **Tools:** Figma, Cursor, RevenueCat

Product Designer — DateMapper | 2024

Led full UX redesign from concept to launch as sole designer, working directly with the CEO.

- Increased user stickiness and session duration by 35%** through end-to-end UX redesign

"User stickiness and session duration went up significantly. Without Martin, DateMapper would not have been able to get to where it is right now."
— Joshua Lever, CEO of DateMapper

EDUCATION

University of economics Prague | 2017 - 2020

Coursework in Business Economics and Management

Gymnázium Pavla Horova Michalovce | 2014 - 2017
